

Parents:

Did you know?

Children with uncorrected vision conditions or eye health problems face barriers in life...academically, socially, and athletically?

Annual eye exams can break down these barriers and help enable your children to reach their highest potential.

Vision doesn't just happen. A child's brain learns how to use eyes to see, just like it learns how to use legs to walk or a mouth to form words. The longer a vision problem goes undiagnosed and untreated, the more a child's brain learns to accommodate the vision problem.

That's why annual comprehensive eye exams are so important!!

Information taken from:
AOA.ORG

Every Child Every Year

Preschool Vision (2 to 5 years)

- The preschool years are a time for developing the visual abilities that a child will need in school and throughout his or her life!

School-aged Vision (6 to 18 years)

- A child needs many abilities to succeed in school. Good vision is key! It has been estimated that as much as 80% of the learning a child does occurs through her or her eyes!
